PROJECT MANAGEMENT IN JIRA

SAVEETHA_PROJECT_SE_TEST_192311337

1.Consider yourself as a project manager and a new project as come for developing arms applications for simats enginerring. Assume that you have got 15 number of tasks from you developers team now you need to create a project management board with the help of tools like JIRA and create a timeline board and an ordered list of activities that are to be present inside the sprint also mention in your documentation what are the various meetings that took place before during and after your sprint.

a Jira board named "saveetha_project_se_test_192311337".
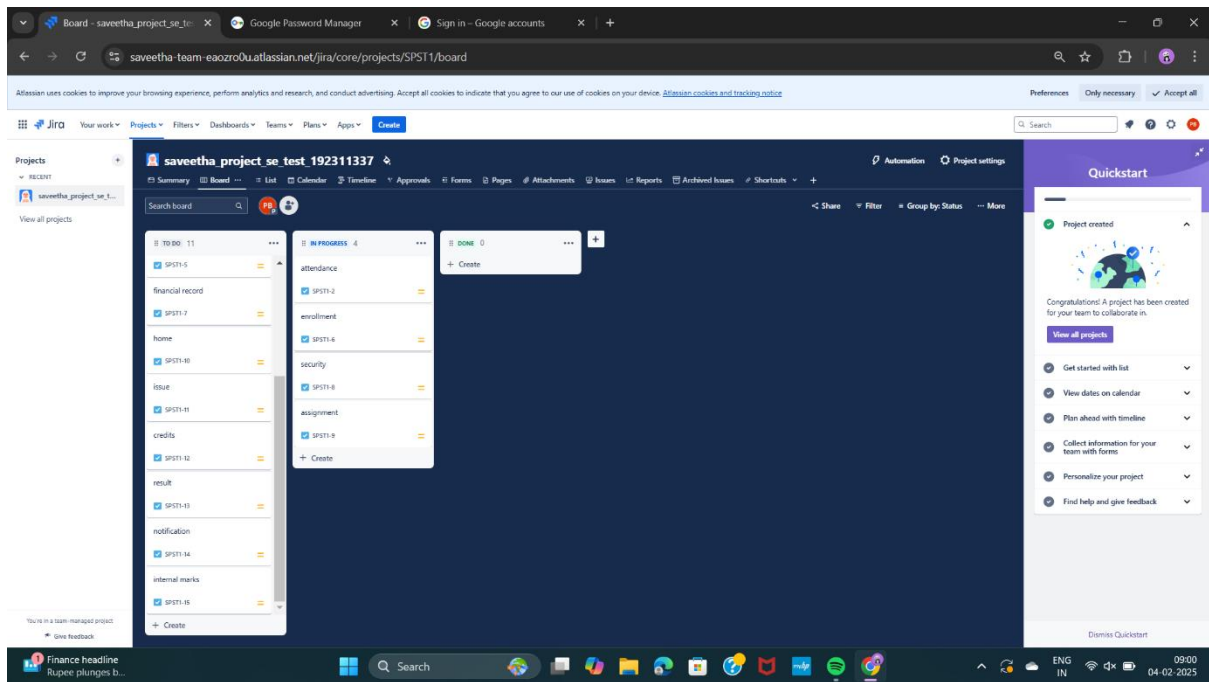

STEP 1:

o Do (15 tasks): Contains multiple tasks such as including profile setup, attendance tracking, feedback collection, course management, history review, enrollment processing, financial record maintenance, and security management etc.

In Progress (0 tasks): No tasks are currently in progress.

Done (0 tasks): No completed tasks.
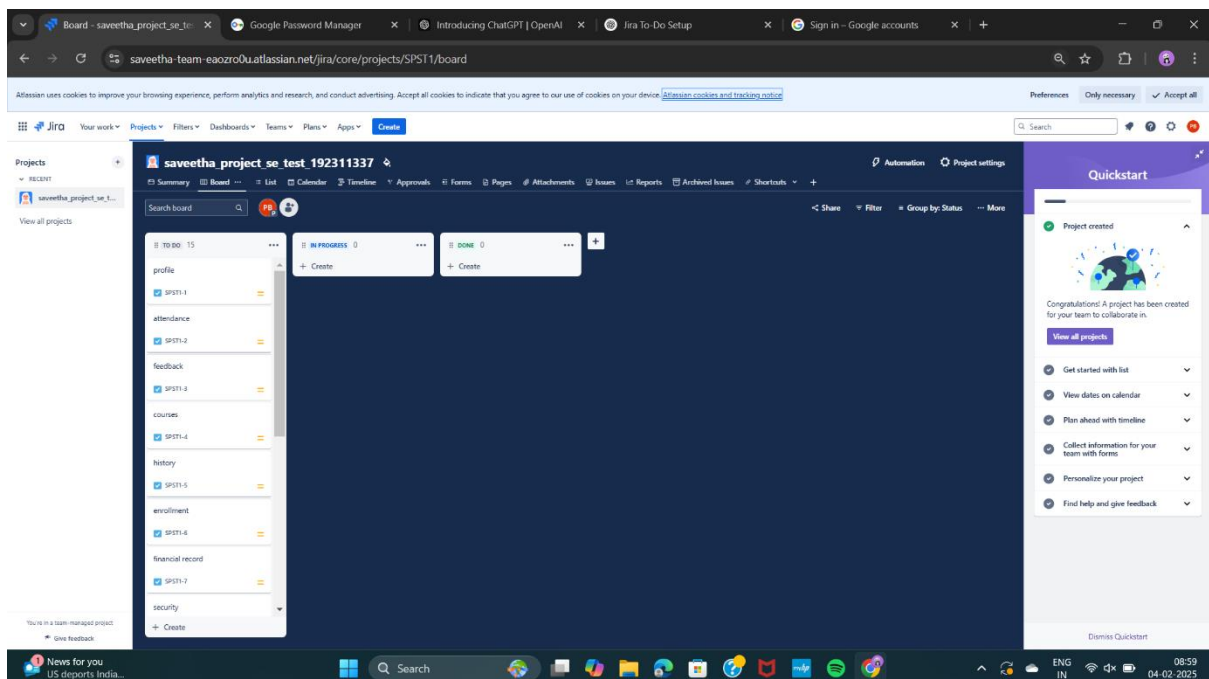

STEP 2:

The project is moving forward as key tasks transition from the "To Do" list to "In Progress." Attendance tracking, security management, enrollment processing, and assignment handling are now actively being worked on. These tasks are crucial for the project's development, ensuring that records are maintained, access is secured, student enrollments are managed efficiently, and assignments are processed on time. The team is focused on completing these tasks before moving them to the "Done" stage.

STEP 3:
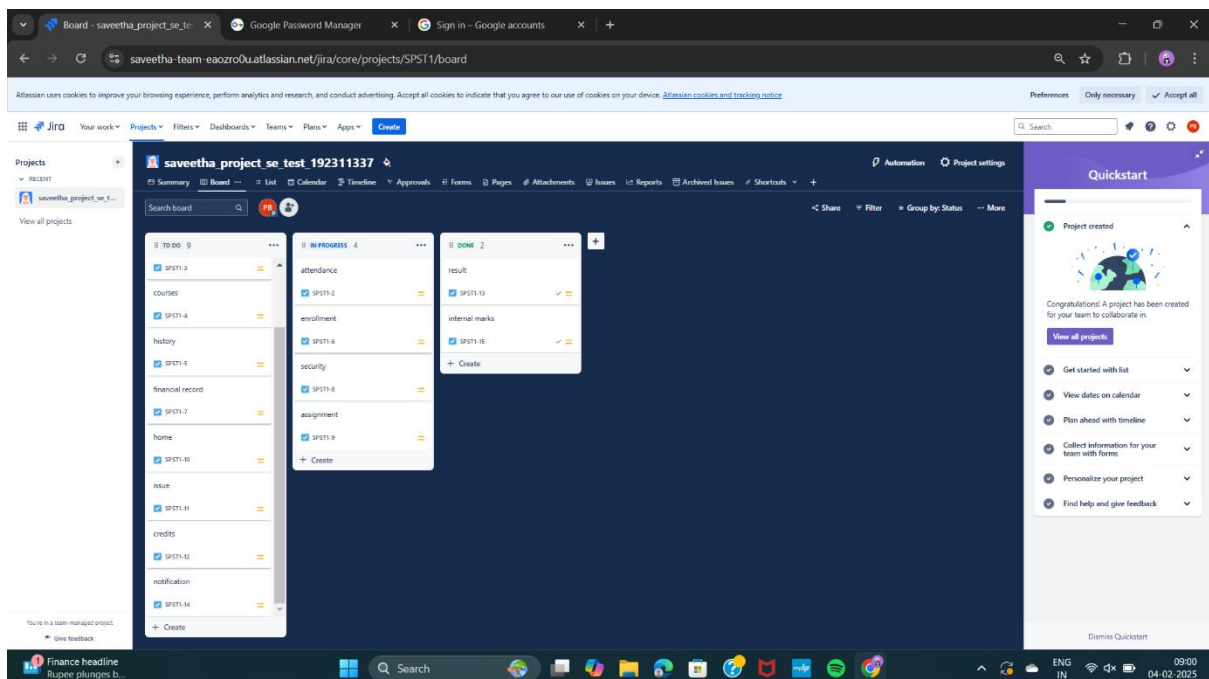

The project has successfully progressed, with key tasks now marked as "Done." The completion of result processing and internal marks management ensures that student

performance data is accurately recorded and finalized. This milestone reflects the team's efficiency in handling academic evaluations, making the system ready for further use and improvements.
